## MC Diagnostics

MC Diagnostics Ltd., a specialist molecular diagnostics company, has been able to expand its product offering thanks to Welsh Government funding.

MC Diagnostics designs and develops molecular diagnostics for the healthcare industry, specialising in the automation of multiplexed molecular assays and custom designed image analysis and interpretation software. The innovative new MC Diagnostics platform represents a new approach to assay processing and results analysis, with the first application being tissue typing for organ matching in transplantation.

With an initial SMARTCymru funding from Welsh Government, MC Diagnostics was able to assess the viability of the development of its unique platform and a subsequent development grant enabled it to undertake the necessary research and development to prove its

concept technically. Following successful completion, the company is now looking at different applications for its new platform through collaborations. It is looking to develop new collaborations, to offer allergy screening, autoimmune disease screening, microbiology and genetic disorder screening across Europe.

As a result of key funding since its launch in 2006, MC Diagnostics Ltd. has been able to realise its product offering and expand its markets across Europe.

Pete Maguire, CEO, comments: "Without the initial funding, we probably wouldn't have got the whole product off the ground. Funding from the Welsh Government helped us manage the risk and develop our product into what it is today with the invaluable advice received from expertise."
